

GRADE	A	B	C	D	E	F	NS
Definition	EXCELLENT Outstanding Performance	COMMENDABLE Meritorious Performance	GOOD Highly Comtetent	SATISFACTORY Competent Performance	BORDERLINE FAIL Open To Compensation	FAIL Unsatisfactory	NON- SUBMISSION
Web Application Design 20%	The implemented site provides a slick design which fits the proposed use cases. Page transitions are excellently implemented and user path is clear.	The implemented site provides a good design which fits the proposed use cases. Page transitions are well implemented and user path is mostly clear.	The site design fits most of the proposed use cases. Page transitions are adequate but the user flow is not always clear.	The site design does not fully cover the proposed use cases. The user flow is unclear and there is no coherent user path through the site.	The site design does not reflect the site use cases and the sites use is impeded by the bad design. User path is incoherent and very unclear.	Unintelligible design which prevents the use of the site. No user path is considered.	No Site Submission
Web Application Functionality 60%	The site has been excellently implemented, providing all the functionality required in the overview document. The site functions flawlessly. Extra functionality has been included and is appropriate and well thought out.	The site has been excellently implemented, providing all the functionality required in the overview document. The site functions almost flawlessly. No Extra functionality has been included or extra functionality is inappropriate for the sites use.	The site has been well implemented, providing much of the functionality required in the overview document. The site is mostly functional. No attempt at extra functionality has been implemented.	The site implementation provides some of the functionality required in the overview document. The site is somewhat functional. No attempt at extra functionality has been implemented.	The site implementation provides little of the functionality required in the overview document. The site is somewhat functional. No attempt at extra functionality has been implemented. Very limited use of web technology has been demonstrated	The site implementation provides none of the functionality required in the overview document. The site is non- functional. No attempt at extra functionality has been implemented.	No Site Submission
Web Application Testing 20%	Documents all test cases fully & accurately. Testing covers all aspects of site functionality. Testing process is designed to ensure that the site is tested under realistic conditions and that all security mechanisms are fully exercised.	Test cases are mainly full and accurate. Testing covers main aspects of site functionality. Testing process is designed to ensure that the site is tested mostly under realistic conditions and that main security mechanisms are exercised.	Test cases are mainly full and accurate. Testing covers some aspects of site functionality, however there are important omissions. Testing process is not a realistic simulation of real site use. Security features are mostly untested	Test cases do not fully cover the sites use.. Testing covers some aspects of site functionality; however there are large important omissions. Testing process is not a realistic simulation of real site use. Security features are completely untested.	Test cases are poor and make little attempt to cover the sites use or functionality. Testing process is haphazard and unrealistic. Security features are completely untested	No testing has been performed on the system, or test cases are poor and make no attempt to cover the sites functionality	No web application testing has been performed
